

### Kelpinc Introduces ACC+

ACC+ (Automatic Compressor Control) is a revolutionary product based on an old idea; saving money by reducing energy costs. For years, hotels, resorts, and leased and rental properties in Hawaii, Puerto Vallarta, Los Cabos, and Cozumel, just to name a few, have successfully controlled the unnecessary waste of cool air flowing from inside to outside. How have they accomplished this? By installing special wiring and switches at strategic locations, such as patio doors and sliding windows, to regulate the AC while doors and/or windows are left open.

### ACC+ Is the Answer

Our studies have shown that a typical rental condo in Puerto Peñasco Mexico, on a single day during peak season, can have patio doors opened and closed an average of 16 times a day with the average time left open nearly 28 minutes at a time! That means during the peak season, on average, patio doors can be open nearly 40 days per year!

### Energy Conservation & Savings

The cost of electricity is going up all around the world, no matter what source the energy it is

coming from. By having ACC+ on your side, you can automatically conserve while reducing energy costs!

### What You Get

ACC+ is a wireless system. The system comes with wireless sensor(s) mounted on designated doors and/or slider windows, ACC+ Control, Glass and wall mounted notices, a system indicator, and built-in 36 second entry/exit for those quickie pass-through times!

### Use in Multiple Zone Systems

Each receiver (more than one is needed if the system has multiple thermostat zones), is designed to be fail-safe. If, however, a problem would occur with ACC+, it can be quickly bypassed by a maintenance action.

### System "OK"

Each system has an unobtrusive, glowing green light indicating the system is "OK" and that all doors and windows are closed properly. This light is located in a convenient but visible place. With the aid of a small notice, any owner, renter or maintenance person can see that an energy-saving system is in place, and that it is working.

### Added System Protection

Every ACC+ system adds extra protection for your compressor. Some HVAC systems don't offer any kind of brown-out or short-cycle protection. ACC+ includes a UL listed device made especially for commercial compressor control and protection.

### Near Zero Maintenance

Each sensor comes with a common disk battery that has a normal life of 5-8 years before needing replacement. So Replacement is easy and can be done without the need for special tools or expertise.

**Get it installed or not**

ACC+ is available two ways: fully installed at your site or as a parts kit that you install. Several major resorts have been fitted with ACC+ so many times fast, efficient installation is available on request. Generic parts-only kits are also available for those same resorts.

**Wall mounted indicator**

**Ceiling mounted indicator**

**Installation**

ACC+ depends on having AC power available and access to thermostat wiring. Any convenient location such as a utility area, in the ceiling or under a shelf is enough to hide and protect it.

**Reliability**

ACC+ contains commercial parts that are proven for long-life and reliable operation. Each system is warranted for 2 years with professional installation warranted for 1 year. ACC is unaffected by brownouts or power surges with built-in protection.

**Return on Investment**

ACC+ is a good value. On average, electricity costs can be reduced from 20-40% depending on occupancy and weather conditions. Since you can't control what happens, ACC+ also provides the assurance that usage, as well as wear-and-tear on your AC system are automatically kept to a minimum.

**Buying ACC+**

Both installations and parts kits of ACC+ are now available for purchase on-line. Installations can be scheduled while kits can be sent to any U.S. address. Forms are available for custom or special applications.
